Boat Dollies

Our marine Boat Dollies are built with heavy steel construction and an attractive, rock-hard powder coated finish. With two "Vee" crossmembers, they're designed to accommodate most hull configurations. Each dolly is equipped with Polyurethane crowned wheel casters for superior ease of operation and grease fittings for a long maneuverable life. Fully carpeted, quick pitch adjusting pads allow full contact to the hull. Because of our quick release machine pins, no tools are required for height or width adjustment on any model. For safety purposes, Our Boat Dollies are designed to maintain the lowest profile available, keeping a ground based center of gravity for work or static displays.

- * 3,600 lb capacity..
- * Completely powdercoated
- * Includes two carpeted pads and locking shafts.
- * Four Polyurithane swivel castors.
- * Horizontal range:
27.5"/ 70cm - 36.5"/93cm
- * Vertical range:
15"/ 38cm - 20"/ 51cm

- * Welded triangle design
- * Powdercoated finish
- * Swivle top
- * Plywood pad
- * Geometrically superior

Our marine powerboat and sailboat stands are designed to be stackable to minimize storage space. Boat stands are used as stabilizers. Use blocking fore and aft to support all weight of the boat on the keel. For power boats, use a minimum of four (4) stands, plus an additional pair for every 10 feet of boat length over 20 feet.

Yellow Jacket Boat Stands

These are actually the same high quality stands that our customers have come to know and trust to but we've decided based on customer feedback that switching from our company blue color to Safety yellow will make the stands much more visible to forklift and crane operators. This should help the stands AND equipment from being damaged as much as conventional blue, black and galvanized colored stands.

Ask any Engineer and he'll tell you that the strongest shape is a triangle, well our stands are a captive triangle so there is no way for the legs to spread and fail like some of our competitors. Strongest structural shape yet still stackable and nestable.

9" X 9" plywood pads protect the hull while minimizing slippage.

BSSM shipping weight is 34 lbs each

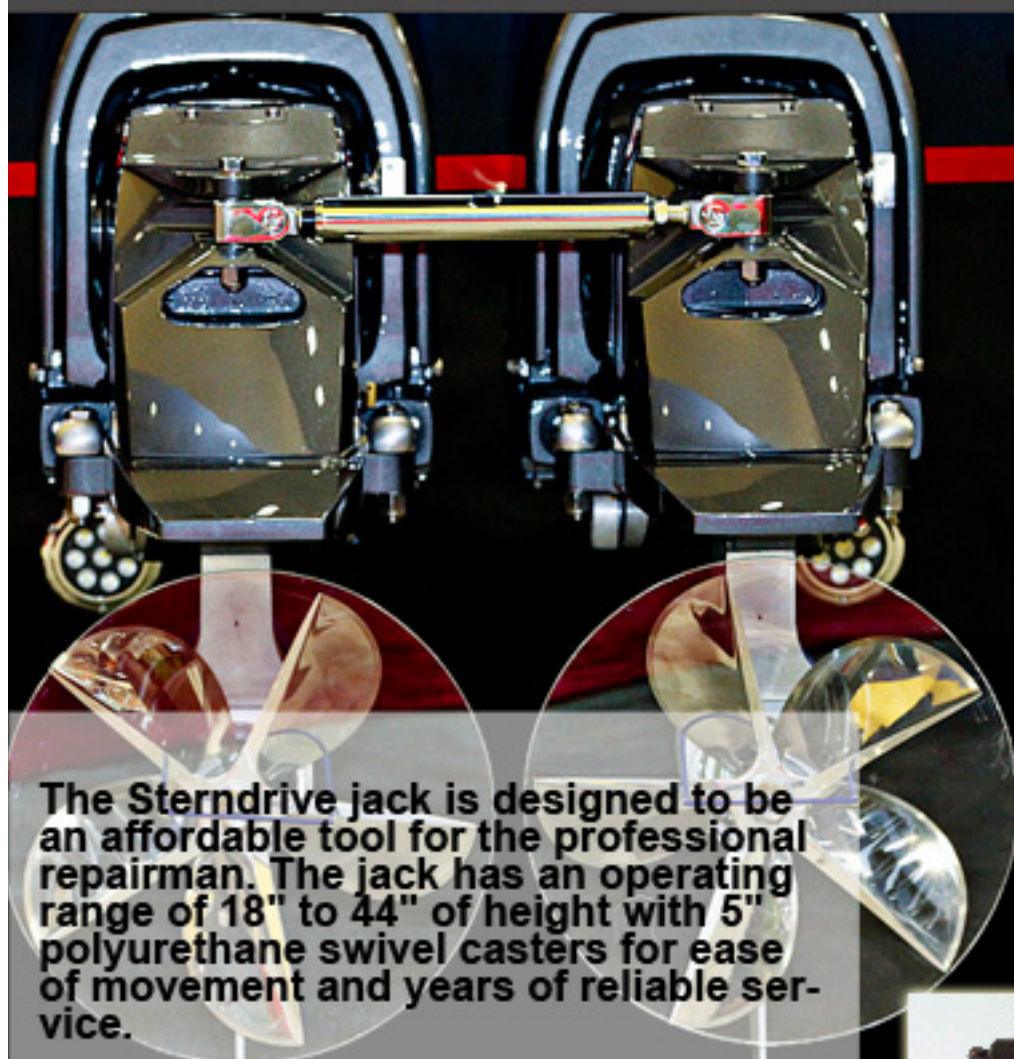

BSLG shipping weight is 37 lbs each

Quantity pricing available on 12-20, 20-99 and 100up.

Outdrive Jack

The Sterndrive jack is designed to be an affordable tool for the professional repairman. The jack has an operating range of 18" to 44" of height with 5" polyurethane swivel casters for ease of movement and years of reliable service.

The top of the jack is lower than the top of all drives to allow use under most all swim platforms.

Integrated into the jack is a plastic nut and bolt storage bin included.

Shipping weight is 60 lbs each
